Delete a bad request from infocube with aggregate

(BW Admin)

BW Reporting Solution

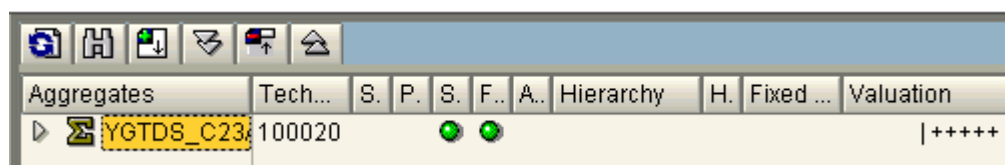

When you have to delete a bad request form an infocube with aggregates (rollup) you have to proceed as following:

1) Run the transaction RSA1, select the option 'DataTarget' and select the infocube.

2) Click on the button  to check the aggregates.

3) Select the aggregate that you need to switched off:

4) After select the aggregate (see above) you have to click on the button  to deactivate it.

The status of the aggregate should turned to red .

Note: If you want do delete the bad request without proceed as above you will receive the following error message:

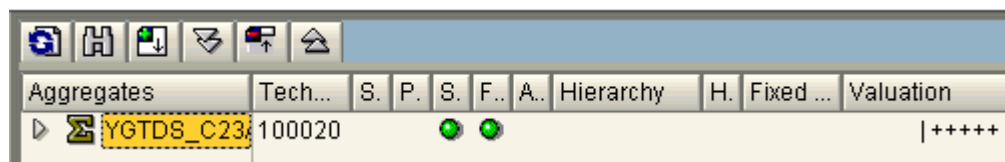

5) Return to transaction RSA1, select infocube, right mouse click and select the option 'Manage', find the request that need to be delete.

6) Delete the bad request.

7) Proceed with the steps 1 and 2.

8) Select the aggregate that you need to switched on.

9) After select the aggregate you have to click on the button  to activate it.

10) Return to transaction RSA, select infocube, right mouse click and select the option 'Manage', select 'Rollup'

11) Select the option 'Selection' and run the job in background to fill the aggregates again.
