

## Issue:

**System: AA4**

**Infopackage: 2LIS\_11\_VASCL\_DELTA**

There is a problem scheduling updates from the PSA for ODS YGTGD033. The error "Request REQU\_3PM0HXUHP8Y8YKSUDAQRD3Q(107.399) has not or not correctly been updated: Please edit" does not allow to schedule anything above the date of 5/14, besides when trying to load data into ODS YGTGD033, data target is not appearing in the data target tab

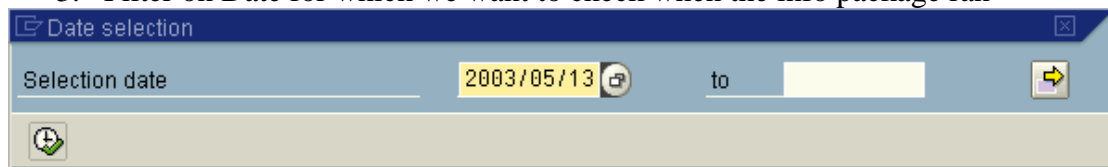

Reason: The PSA update was not made on preceding day 5/13 though the infocubes were updated.

Resolution:

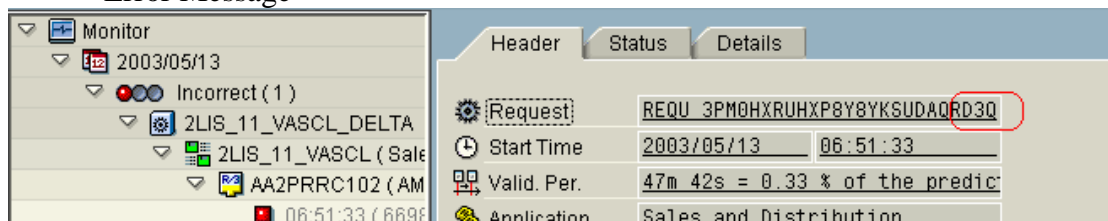

Force the QM status for day the info package ran to red and subsequently delete the request from all cubes. This allowed us to continue pushing psa requests to the ODS.

Steps:

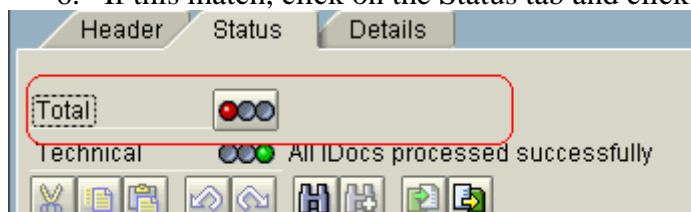

1. Find the Info Package (2LIS\_11\_VASCL\_DELTA):
2. Click on Monitor
3. Filter on Date for which we want to check when the info package ran

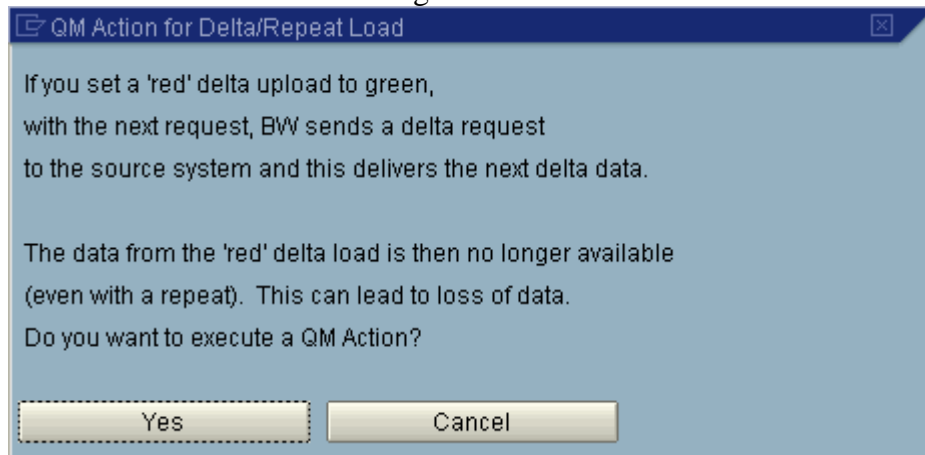

4. Click on Execute
5. Check for the last 4 characters of the Request to match with the Request in the Error Message

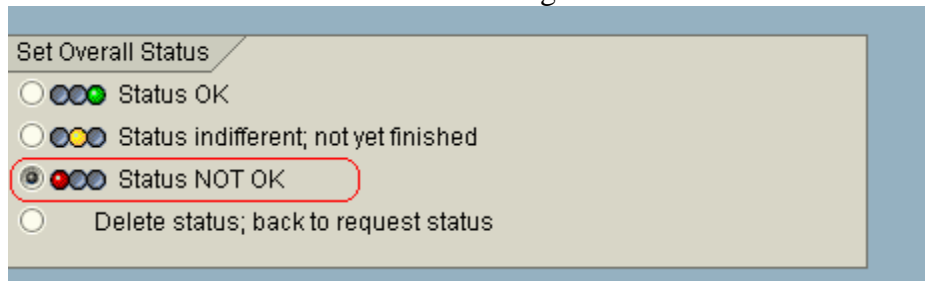

6. If this match, click on the Status tab and click on the highlighted button

7. click Yes on next message:

8. On next screen select the following screen:

9. Continue on updating the updates on ODS
